

## Pedigree Wizard 5 - Add sheep and data via "Add/Change"

Task	Description	Screenshot
	Introduction. How to add sheep and data using "Add/Change" in PW.	
<b>A</b>	<b>Add sheep via "Add/Change"</b>	
<b>A1</b>	New sheep can also be added to PW via Add/Change. From the homepage, click on the Add/Change button.	
<b>A2</b>	From the Add/Change set up box tick the Birth and Body Weights boxes (if birth weight has not been collected, leave this box blank). Ensure the Breed, Flock and Year Drop are correct. Type in the management number (up to 4 digits) of the lamb and click on OK.	
<b>A3</b>	PW Auto Build has created the unique 16 digit ID number for the lamb. Use the Tab or Enter buttons on the keyboard to move between fields. Enter the Sire and Dam of the lamb. For the <b>Sire</b> , can use autobuild by typing the last 6 digits of the 16 digit ID number if it is one of your own sires, or use the function keys, or choose from the picklist or type in the whole 16 digit ID number. For the <b>Dam</b> , can also use autobuild by typing the last 6 digits of the 16 digit ID number if it is one of your own dams, or use the Function keys or type in the whole 16 digit ID number. Enter the Group, Sex, CM, BT and RT. Enter the birth weight if known and the birth date. Click on Save. (Other information such as lambing ease and conception date will need to be entered manually - suggest use "Quick Add" instead if this information has been collected. See PW Video 4)	

<b>B</b>	<b>Add data via "Add/Change"</b>	
<b>B1</b>	Data collected at various age stages may also be entered via Add/Change. For example, add the weaning weights for a 2012 drop lamb. Ensure the "Drop" is 2012 and the "3 months" and "Body Weights" boxes are ticked. Type in the management number (up to 4 digits) of the lamb and click on OK.	
<b>B2</b>	The lamb details will appear at the top and also data that has been previously entered for that lamb. Enter the weaning weight and date the weight was taken in the appropriate fields. Click on "Save".	
<b>B3</b>	"Add/Change" will allow measurements taken at different age stages to be entered for the one animal at the same time. For example, to enter the weaning weight and Early Post Weaning weight, scan data and scrotal circumference, tick the appropriate boxes in the Add/change set up box. Enter the correct "Drop" year and ID number (up to 4 digits) of the lamb. Click on OK.	
<b>B4</b>	The Add data screen will now allow the appropriate fields to be completed. Enter the information and then click on Save.
