

The LAMBPLAN Maternal Index Survey

Calling all commercial producers - have your say!

Sheep Genetics is currently collecting information on flock structure and output information from commercial operators who:

- Join Merino ewes to a Maternal sire (e.g, Border Leicester) to produce first cross sheep
- Breed from first cross ewes
- Purchase Maternal rams for a self-replacing flock

As indexes are developed for industry, please consider commercial production system data as opposed to data from your ram breeding flock when completing the survey.

If you are a commercial producer who has more than one production system, please fill out all relevant surveys. The survey takes approx. 40-60 minutes to complete.

Thank you - we appreciate your feedback!
